I am a highly motivated full-stack developer with an ambition for learning. I have spent 12 months attending Kenzie Academy's full stack developer program, and I am passionate about continuing my journey in IT and software development. I am seeking opportunities to leverage my experience, my soft skills, and coding knowledge to make impactful contributions to your projects.

Key Qualifications

· Studied Full-Stack Development and a range of programming languages during a year-long bootcamp with Kenzie Academy, a leading project-based training boot camp for software development

· Through years of experience working in and leading small businesses, I have developed strong skills in customer satisfaction, quality assurance, team leadership, and business management. I believe these skills paired with my project-based training at Kenzie Academy will help me succeed as a Full-Stack Developer.

SKILLS

- HTML/CSS
- JavaScript
- React
- Node.js
- Python
- Django
- Express & Mongoose

EXPERIENCE

Kenzie Academy | Software Development | Project Based Training |October 2020 – October 2021

· Participated and excelled in software engineering program earning front-end and full stack web development certificate.

· Gained proficiency in building web applications and databases using JavaScript with React, and Python with Django and using a multitude of tools and technologies including MongoDB, Node.js, Express, Mongoose.

· Gained project-oriented experience that required adaptation to learning new technologies on a consistent basis.

· Worked as a productive member of a remote development team to create real world applications within specified criteria and deadlines. Projects included object-oriented programming, unit testing, virtual environments, utilizing third party APIs, creating APIs, and user credential and authentication systems.

· Worked as product owner to develop a Microblogging Platform with a team of 3 other developers. We utilized authentication features, CRUD operations while improving proficiency with React and Redux.

- Worked as product owner with a team of 3 developers to develop a task manager application, You Can Dos, using a MERN stack, deployed with Firebase, and utilized user authentication, a database with MongoDB to store data, and React and Redux to manage front end user interface.
- Worked in an agile scrum environment as a scrum-master with a team of 4 developers to create a social media application called FUNdler. We created the web application with Python using Django framework and template language to store data and design for front end user interface. I deployed it to Heroku with various packages such as Gunicorn, Whitenoise, and Cloudinary to store user uploaded images.

Victory Bar and Grill |*Manager* |July 2018 – Present
- Responsible for day-to-day operations of a team of 25 personnel, ensuring customer satisfaction and compliance with team and state/local regulations. This included being responsible for resolving customer complaints and ensuring the safety of all personnel on the premises
